## Liquid Flowmeters

DIGMESA flowmeters are patented and versatile precision devices used where extremely accurate liquid flow-rate measurements are essential.

### So that the figures add up to the end of the day...

In the trade the problem is well known and notorious: unmeasured product dispensing results in a loss of up to 25% of sales.

The solution: measuring devices and electronic registration devices from Digmesa. Developed in accordance with the latest knowledge in drink technology these devices ensure totally accurate measurement.

### Swiss quality design and manufacture

- ◆ Exceptional accuracy and repeatability
- ◆ Numerous options available including various materials of construction, multiple plumbing and electrical connections, as well as a unique **froth detection sensor** that disables the flow signal or provides a separate digital output signal

Frothing probes

German bar dispensing standard.

The German Test Centre for Draught Beverage Systems has tested and approved this Digmesa flowmeter as the first measuring unit of this type.
