High Current Probe Butt Contact BC Series

What is Butt Contact?

A Butt Contact is a high-current probe that can energized electronic devices by simply pressing the coil spring.

Canted coil spring

- Stable energizing
- Reduces scratches to the products
- Running cost down

Advantages of the Butt Contact

-It reduces defective products by using a stable energizing contact.

High contact reliability is achieved by ensuring that the coil spring is in contact with the touching surface therefore a stable contact is achieved.

-It reduces scratches to the products

The canted coil spring makes a soft contact with the inspection target with multiple points of contact.

-It keeps running costs down

It has passed 1 million cycles in our in-house endurance test. Since it is highly durable, it reduces the frequency of maintenance and it last longer than other existing probes.

Each coil spring contact follows the roughness of the target surface.

Product line-up

There are 4 types of Butt Contact.

Model	Rated current	Tip diameter	Pressurizing spring force	Screw size
BC50-8	50A	φ8 mm	5N~9N	M3
BC75-12	75A	φ12 mm	$16N \sim 28N$	M4
BC140-17	140A	φ16.5 mm	$16N \sim 28N$	M5
BC230-19	230A	φ18.5 mm	$16N\sim 29N$	M6

Application examples

- For shipment inspection of power semiconductor modules and smart meters.
- · For manufacturing inspection process for automobile parts.
- Used for power supply connection for Auto Guided Vehicles (AGV).
- For operation check in the production process of inverters, etc.
- · Lithium-ion battery charging.

Current energization test method

Globetech shows the results of the rising of temperature by conducting an in-house energization test using the connection 2 tests below.

Please use it for your reference for current selection.

TEST 1

Energizing with touching all surface

This is the **best contact method** that maximum performance. Both the canted coil spring and the conductor body are in contact with the test object.

GLOBETECH

Energizing with only touching the canted coil spring

This is **minimum contact method** for use Butt Contact. Only the canted coil spring is in contact with the test object.

- Overcurrent energization test

Data on temperature rise and natural cooling during short-time current exceeding the standard allowable current. *The data is the temperature change when the coil spring and body are connected. (Test1)

*The Butt Contact is designed to rotate a maximum of 15 deg when pressed against the target object being inspected such as plate. Install the Butt Contact so that movement is not hindered by cable tension, etc.

1.Remove the fixing nut from the fixing nut from the flanged bushing.

2.Insert the Butt Contact into the hole to be fixed.

3. Tighten the nut to fixed the Butt Contact. Tighten it by crimping the terminal with a nut.

Specifications

Usable temperature	: -40°C to +140°C / -40°F to 284°F * Including its own temperature rise value when energized.
Rated current	: 50A
Contact resistance	: $1m\Omega(ref. value)$ or less *condition : Pure copper / silver plating
Voltage	: If the fixing plate is metal, please use it at less than 200VAC/DC
Estimated durability	: 100,000 to 1,000,000 cycles
Pressurizing spring forc	e: 5N - 9N

Current energization test result

Refer to the page 3 about the test method.

TEST 1

Temperature change when energizing with touching all surface

Current [A]	Temperature change ⊿T[℃]				
Current [A]	5min	10min	30min	60min	
50	19.5	25.6	29.7	29.8	
65	26.8	35.1	40.9	40.8	
80	40.2	54.4	63.1	63.2	

Cable size used in the test is 5.5sq

Overcurrent energization test

Temperature change when energizing with only touching the canted coil spring

Current [A]	Temperature change ⊿T[℃]			
Current [A]	5min	10min	30min	60min
30	15.3	20.6	22.9	22.7
40	27.7	34.8	37.0	36.8
50	40.8	48.1	50.6	50.8

Cable size used in the test is 5.5sq

Temperature change ⊿T[°C] 120 110 100 90 250A 80 70 200A 60 150A 50 40 30 20 10 0 01:30 02:00 02:30 03:00 03:30 04:00 04:30 00:00 00:30 01:00 05:00 05:30 06:00 Energizing time[hh:mm]

Temperature change during 150A/200A/250A short-time current test

Cable size used in the test is 5.5sq

Specifications

Usable temperature	: -40℃ to +140℃ / -40℉ to 284℉	* Including its own temperature rise value when energized.
Rated current	: 75A	
Contact resistance	: 1mΩ(ref. value) or less *condition	: Pure copper / silver plating
Voltage	: If the fixing plate is metal, please	use it at less than 200VAC/DC
Estimated durability	: 100,000 to 1,000,000 cycles	
Pressurizing spring for	ce: 16N - 28N	

Current energization test method

TEST 1

Temperature change when energizing with touching all surface

Current [A]	Temperature change ⊿T[℃]				
Current [A]	5min	10min	30min	60min	
65	11.8	20.0	25.7	25.9	
75	15.1	22.9	28.5	28.5	
85	23.3	33.8	37.6	37.5	

Cable size used in the test is 8sq

Overcurrent energization test

when energizing with only touching the canted coil spring

Current [A]	Temperature change ⊿T[°C]				
Current [A]	5min	10min	30min	60min	
65	27.3	32.2	34.2	34.5	
75	29.1	38.7	44.3	43.8	
85	36.0	49.3	59.7	59.2	

Cable size used in the test is 8sq

Temperature change during 180A/250A/300A short-time current test

Cable size used in the test is 14sq

Specifications

Usable temperature	: -40°C to +140°C / -40°F to 284°F * Including its own temperature rise value when energized.
Rated current	: 140A
Contact resistance	: $1m\Omega(ref. value)$ or less *condition : Pure copper / silver plating
Voltage	: If the fixing plate is metal, please use it at less than 200VAC/DC
Estimated durability	r : 100,000 to 1,000,000 cycles
Pressurizing spring forc	e: 16N - 28N

Current energization test result

Refer to the page 3 about the test method.

TEST 1

Temperature change when energizing with touching all surface

Current [A]	Temperature change ⊿T[°C]			
	10sec	5min	30min	60min
100	0.4	6.2	19.3	19.8
120	0.5	11.5	27.8	27.8
140	0.7	14.0	33.3	34.8

Cable size used in the test is 38sq

TEST 2

Temperature change when energizing with only touching the canted coil spring

Current [A]	Temperature change ⊿T[℃]			
	10sec	5min	30min	60min
100	0.7	15.1	27.8	28.2
120	0.9	21.4	39.3	39.8
140	1.1	28.1	48.4	48.5

Cable size used in the test is 38sq

Overcurrent energization test

Temperature change during 300A/400A/500A short-time current test

Specifications

Usable temperature	e :-40℃ to +140℃ / -40℉ to 284℉	* Including its own temperature rise value when energized.
Rated current	: 230A	
Contact resistance	: 1mΩ(ref. value) or less *condition	n : Pure copper / silver plating
Voltage	: If the fixing plate is metal, please	use it at less than 200VAC/DC
Estimated durabilit	y:100,000 to 1,000,000 cycles	
Pressurizing spring for	ce: 16N - 29N

NOTICE:

- 1. All data in the catalog is test data obtained in our internal conditions and environment, and it does not guarantee performance in the customer's one. Be sure to evaluate the product in the customer's environment before use.
- 2. When contacting to a fixed location, assemble so that the Butt Contact makes straight contact with the target object.
- 3. The contact part is greatly affected by the other contact side such as material, surface finish, surface rough and shape. Be sure to check safety, such as for temperature rise, before use.
- 4. One million cycles is listed based on data from in-house experiments. The number of cycles will vary depending on the current value, work material, cable installation method, usable contact resistance standards, etc.
- 5. There are possibilities that arcing, and heat generation occur due to wear of the coil spring. Please periodically confirming that no arcing or heat generation is occurring.
- 6. Specifications are subject to change without prior notice.
